Slides are available as PDF

Introduce IPv6

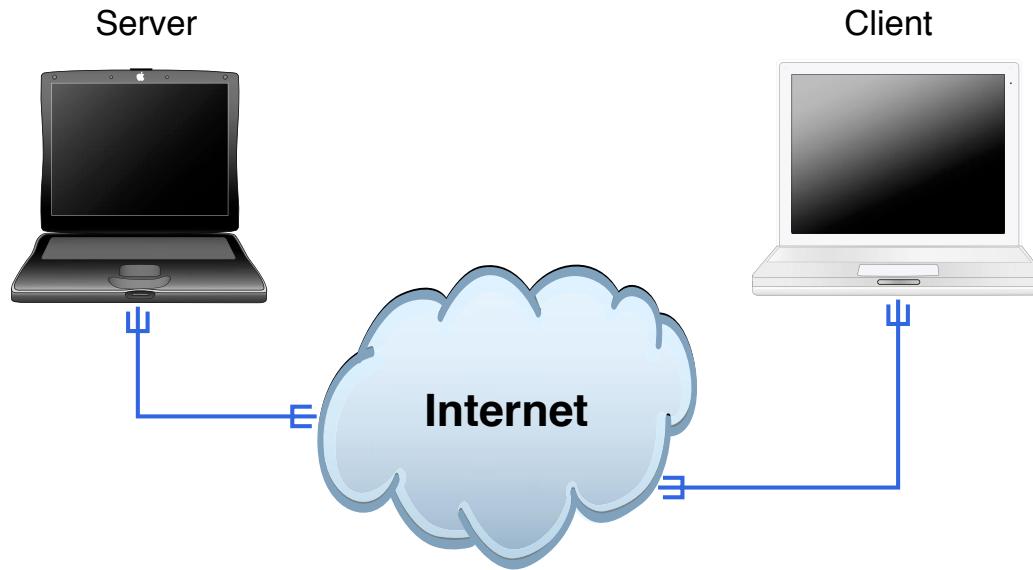

IPv6 addressing

Neighbor Discovery Protocol

IPv4 vs IPv6 - Differences and similarities

Practical examples

Ressources

Clients and servers

Rooted in academic networks

Protocols which are more than 20 years old

Very little encryption and security built into the network

We reject kings, presidents, and voting.
We believe in rough consensus and running code.
– The IETF credo Dave Clark, 1992.

RFC - Request for comments

RFC, Best Current Practice, FYI, informational

Standards track:

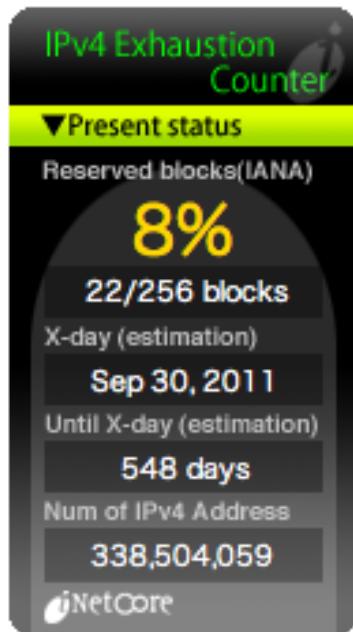

Proposed Standard → Draft Standard → Standard

Internetworking: history

- 1961 L. Kleinrock, MIT packet-switching theory
- 1962 J. C. R. Licklider, MIT - notes
- 1964 Paul Baran: On Distributed Communications
- 1969 ARPANET 4 nodes
- 1971 14 nodes
- 1973 Design of Internet Protocols started
- 1973 Email is about 75% of all ARPANET traffic
- 1974 TCP/IP: Cerf/Kahn: A protocol for Packet Network Interconnection
- 1983 EUUG → DKUUG/DIKU forbindelse
- 1988 About 60.000 systems on the internet - The Morris Worm hits about 10%
- 2002 Ialt ca. 130 millioner på Internet
- 2010 IANA reserved blocks 7% (Maj 2010) - <http://www.potaroo.net/tools/ipv4/>

Projected IANA Unallocated Address Pool Exhaustion: 30-Sep-2011

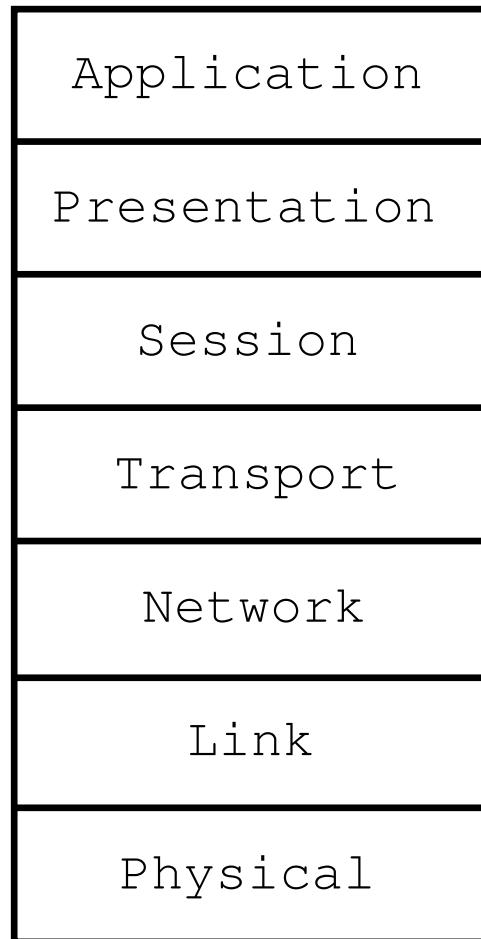

Projected RIR Unallocated Address Pool Exhaustion: 27-Jul-2012

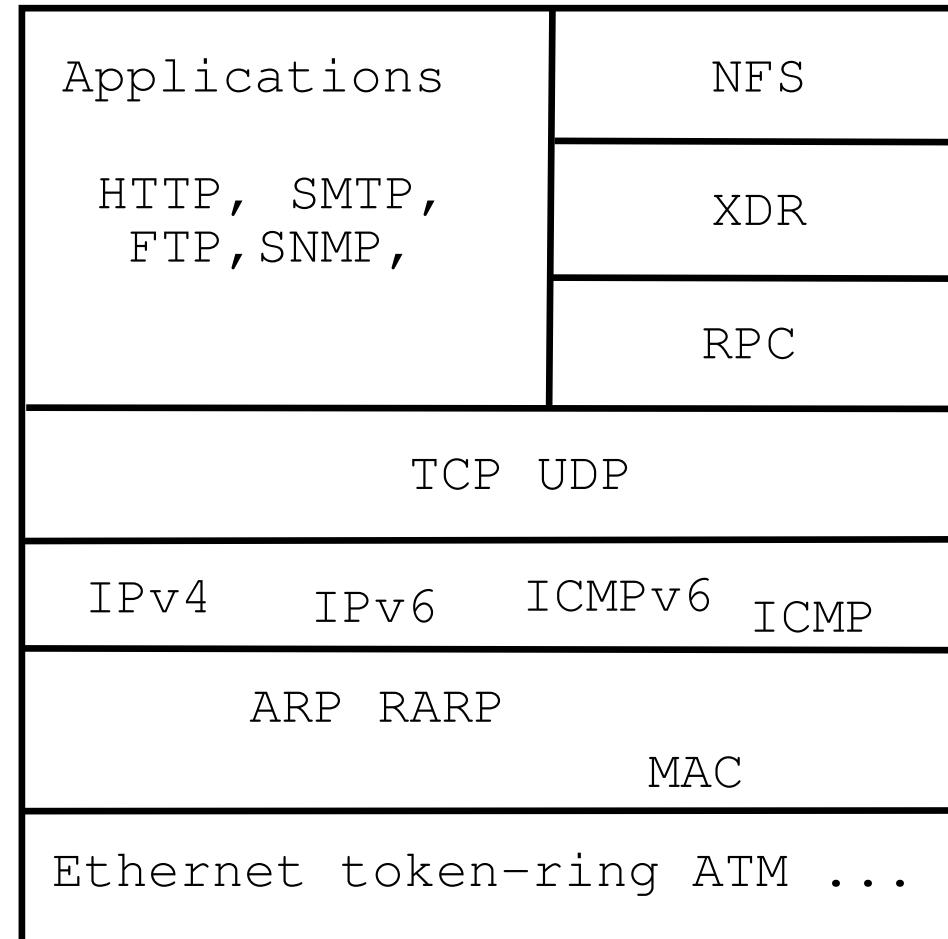

<http://www.potaroo.net/tools/ipv4/>

No more talk, we need IPv6, get to work - end of discussion

OSI Reference Model

Internet protocol suite

Preserve the good stuff

back to basics, internet as it used to be!

fate sharing - connection rely on end points, not intermediary NAT boxes

end-to-end transparency - you have an address and I have an address

Wants: bandwidth +10G, low latency/predictable latency, Quality of Service, Security

IPv6 is evolution, not revolution

Note: IPv6 was not designed to solve all problems, so don't expect it to!

The Internet has done this before!

Because all hosts can not be converted to TCP simultaneously, and some will implement only IP/TCP, it will be necessary to provide temporarily for communication between NCP-only hosts and TCP-only hosts. To do this certain hosts which implement both NCP and IP/TCP will be designated as relay hosts. These relay hosts will support Telnet, FTP, and Mail services on both NCP and TCP. These relay services will be provided beginning in November 1981, and will be fully in place in January 1982.

Initially there will be many NCP-only hosts and a few TCP-only hosts, and the load on the relay hosts will be relatively light. As time goes by, and the conversion progresses, there will be more TCP capable hosts, and fewer NCP-only hosts, plus new TCP-only hosts. But, presumably most hosts that are now NCP-only will implement IP/TCP in addition to their NCP and become "dual protocol" hosts. So, while the load on the relay hosts will rise, it will not be a substantial portion of the total traffic.

NCP/TCP Transition Plan November 1981 RFC-801

How to use IPv6

www.solidonetworks.com

hik@solidonetworks.com

www.solidonetworks.com

hik@solidonetworks.com

Really how?

- Get IPv6 address and routing
- Add AAAA (quad A) records to your DNS
- Done

www	IN A	91.102.91.17
	IN AAAA	2001:16d8:dd00:19::2
mail	IN A	217.157.63.115
	IN AAAA	2001:16d8:dd0f::200

IPv4 header - RFC-791

0	1	2	3
0 1 2 3 4 5 6 7 8 9 0	1 2 3 4 5 6 7 8 9 0	1 2 3 4 5 6 7 8 9 0	1
Version IHL Type of Service		Total Length	
Identification Flags Fragment Offset			
Time to Live Protocol Header Checksum			
Source Address			
Destination Address			
Options		Padding	

Example Internet Datagram Header

IPv6 header - RFC-2460

```
+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
|Version| Traffic Class |          Flow Label
+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
|          Payload Length      |  Next Header   | Hop Limit
+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
|          Source Address
|          Destination Address
```

- Hop-by-Hop Options
- Routing (Type 0)
- Fragment - fragmentation only at end-points!
- Destination Options
- Authentication
- Encapsulating Security Payload

Addresses are always 128-bit identifiers for interfaces and sets of interfaces

- Unicast: An identifier for a single interface. A packet sent to a unicast address is delivered to the interface identified by that address.
- Anycast: An identifier for a set of interfaces (typically belonging to different nodes). A packet sent to an anycast address is delivered to one of the interfaces identified by that address (the "nearest" one, according to the routing protocols' measure of distance).
- Multicast: An identifier for a set of interfaces (typically belonging to different nodes). A packet sent to a multicast address is delivered to all interfaces identified by that address.

There are no broadcast addresses in IPv6, their function being superseded by multicast addresses.

subnet prefix	interface identifier
---------------	----------------------

2001:16d8:ff00:012f:0000:0000:0000:0002
2001:16d8:ff00:12f::2

Eight groups of 4 hex-digits separated by colon x:x:x:x:x:x:x:x
each x is a 16-bit piece of the address

Prefixes are written using ipv6-address/prefix-length
Similar to CIDR IPv4 prefixes

Leading zeros within a group can be removed

One or more groups of 16 bits of zeros can be replaced by ::

Note: http://en.wikipedia.org/wiki/Classless_Inter-Domain_Routing

Examples:

- ABCD:EF01:2345:6789:ABCD:EF01:2345:6789
- Address 2001:DB8:0:0:8:800:200C:417A
- Address of loopback ::1
- IPv6 prefix 2a02:09d0:95::1/64, subnet 2a02:09d0:0095:0000::/64
- Address 2a02:09d0:95::1 or 2a02:09d0:0095:0000:0000:0000:0000:0001

Examples:

- ABCD:EF01:2345:6789:ABCD:EF01:2345:6789
 - Address 2001:DB8:0:0:8:800:200C:417A
 - Address of loopback ::1
 - IPv6 prefix 2a02:09d0:95::1/64, subnet 2a02:09d0:0095:0000::/64
 - Address 2a02:09d0:95::1 or 2a02:09d0:0095:0000:0000:0000:0000:0001
-
- Danish sites
 - Name servers for .dk
 - p.nic.dk has IPv6 address 2001:500:14:6036:ad::1
 - s.nic.dk has IPv6 address 2a01:3f0:0:303::53
 - b.nic.dk has IPv6 address 2a01:630:0:80::53
 - ns1.gratisdns.dk has IPv6 address 2a02:9d0:3002:1::2
 - www.solidonetworks.com has IPv6 address 2a02:9d0:10::9

Aggregatable Global Unicast

2001::/16 RIR subTLA space

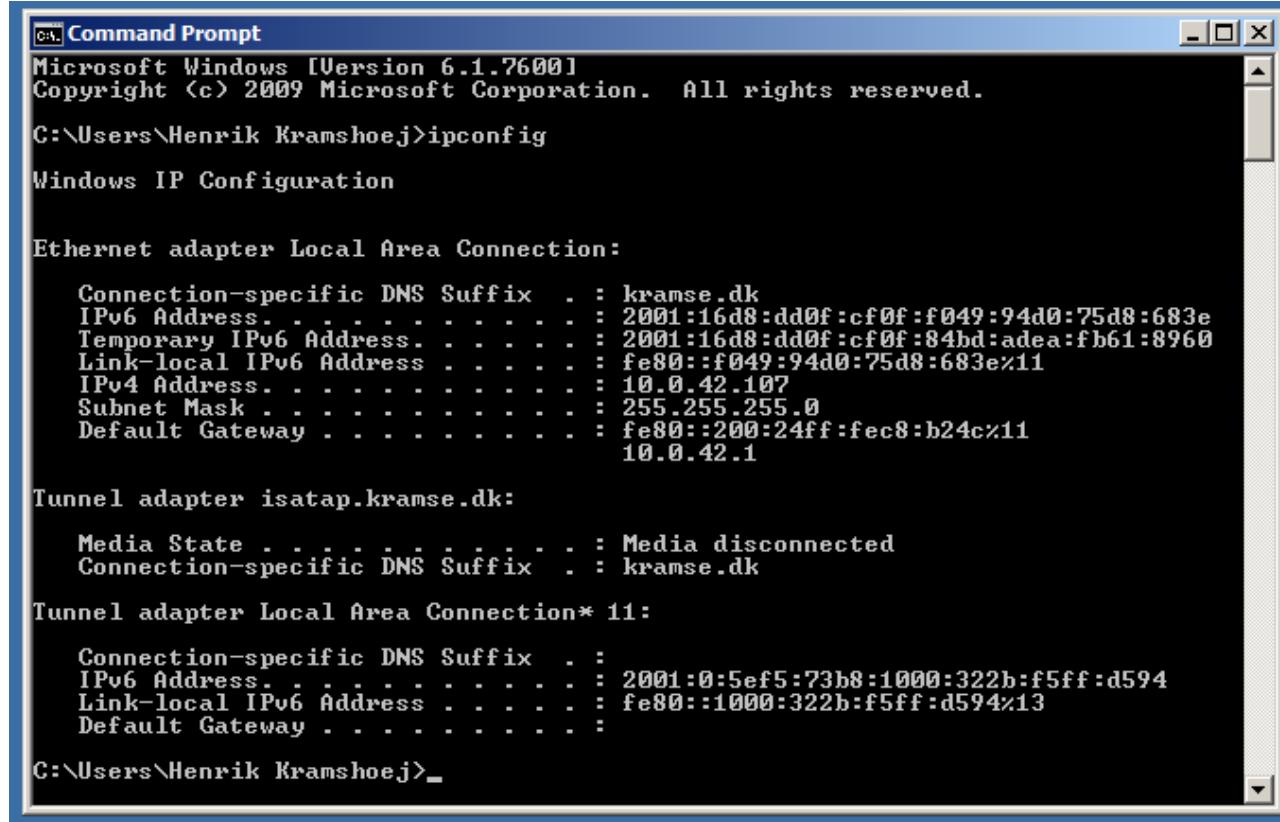

- 2001:200::/23 APNIC
- 2001:400::/23 ARIN
- 2001:600::/23 RIPE

2002::/16 6to4 prefix

3ffe::/16 6bone allocation - old not used anymore

- link-local unicast addresses
fe80::/10 generated from the interface MAC address EUI-64
- FEC0::/10 site-local - deprecated in RFC-3879
- FC00::/7 Unique Local IPv6 Unicast Addresses RFC-4193
<http://www.simpledns.com/private-ipv6.aspx>
- 2001:0DB8::/32 NON-ROUTABLE range to be used for documentation purpose RFC-3849.

```

Only Two places need updating the file /etc/sysconfig/network:

```
NETWORKING=yes  
NETWORKING_IPV6=yes  
HOSTNAME=host1.armadahosting.com  
GATEWAY=10.234.123.254
```

From the file: /etc/sysconfig/network-scripts/ifcfg-eth0:

```
DEVICE=eth0  
BOOTPROTO=none  
ONBOOT=yes  
BROADCAST=10.234.123.255  
NETWORK=10.234.123.0  
NETMASK=255.255.255.0  
IPADDR=10.234.123.90  
USERCTL=no  
IPV6INIT=yes  
IPV6ADDR=2a02:9d0:10::10:234:123:90  
IPV6_DEFAULTGW=2a02:9d0:10::1
```

Modified EUI-64 format-based interface identifiers

```
ifconfig en1
en1: flags=8863<UP,BROADCAST,SMART,RUNNING,SIMPLEX,MULTICAST> mtu 1500
      ether 00:23:6c:9a:f5:2c
                  00-23-6c-ff-fe-9a-f5-2c 48-bit MAC stretched to become EUI-64
                  02-23-6c-ff-fe-9a-f5-2c inverting the "u" bit (universal/local bit)
                  fe80:: + 0223:6cff:fe9a:f52c add link-local prefix
inet6 fe80::223:6cff:fe9a:f52c%en1 prefixlen 64 scopeid 0x6
```

DHCPv6 is available, but instead autoconfiguration is used mostly

This is based on routers sending router advertisements to the network

Individual nodes then combine this with their EUI64 identifier

```
root# /usr/sbin/rtadvd -Df en0 en1
```

Startup in debug mode is nice when testing

```
/etc/rtadvd.conf:  
en0:  
    :addrs#1:addr="2001:1448:81:b00f::":prefixlen#64:  
en1:  
    :addrs#1:addr="2001:1448:81:beef::":prefixlen#64:
```

Note: forwarding must be enabled!

```
root# sysctl -w net.inet6.ip6.forwarding=1  
net.inet6.ip6.forwarding: 0 -> 1
```

```
root# netstat -an | grep -i listen
```

tcp46	0	0	*.80	*.*	LISTEN
tcp4	0	0	*.6000	*.*	LISTEN
tcp4	0	0	127.0.0.1.631	*.*	LISTEN
tcp4	0	0	*.25	*.*	LISTEN
tcp4	0	0	*.20123	*.*	LISTEN
tcp46	0	0	*.20123	*.*	LISTEN
tcp4	0	0	127.0.0.1.1033	*.*	LISTEN

Note: some platforms show tcp/tcp6 for IPv4/IPv6 and some show tcp4/tcp6

IPv6 - inet6 family

```
root# netstat -an -f inet6
```

Active Internet connections (including servers)

Proto	Recv	Send	Local	Foreign	(state)
tcp46	0	0	*.80	*.*	LISTEN
tcp46	0	0	*.22780	*.*	LISTEN
udp6	0	0	*.5353	*.*	
udp6	0	0	*.5353	*.*

icm6	0	0	*.*	*.*	
icm6	0	0	*.*	*.*	

Note: this is from a Mac OS X and edited a little

IPv6 is default for a lot of services

```
root# telnet localhost 80
```

```
Trying ::1...
Connected to localhost.
Escape character is '^]'.
GET / HTTP/1.0
```

```
HTTP/1.1 200 OK
Date: Thu, 19 Feb 2004 09:22:34 GMT
Server: Apache/2.0.43 (Unix)
Content-Location: index.html.en
Vary: negotiate,accept-language,accept-charset
...
...
```

IPv6 is also default in OpenSSH

```
hlk$ ssh -v localhost -p 20123
```

```
OpenSSH_3.6.1p1+CAN-2003-0693, SSH protocols 1.5/2.0, OpenSSL 0x0090702f

U

ping 10.0.0.2 from server

ARP Address Resolution Protocol request/reply:

- ARP request broadcasted on layer 2 - Who has 10.0.0.2 Tell 10.0.0.1
- ARP reply (from 10.0.0.2) 10.0.0.2 is at 00:40:70:12:95:1c

IP ICMP request/reply:

- Echo (ping) request from 10.0.0.1 to 10.0.0.2
- Echo (ping) reply from 10.0.0.2 to 10.0.0.1
- ...

ARP is performed on Ethernet before IP can be transmitted

IPv6 neighbor discovery protocol (NDP)

OSI	IPv4	IPv6
Network	IP / ICMP	IPv6 / ICMPv6
Link	ARP	
Physical	Physical	Physical

ARP er væk

NDP erstatter og udvider ARP, Sammenlign arp -an med ndp -an

Til dels erstatter ICMPv6 således DHCP i IPv6, DHCPv6 findes dog

NB: bemærk at dette har stor betydning for firewallregler!

RFC4861 Neighbor Discovery for IP version 6 (IPv6)

```
hlk@bigfoot:basic-ipv6-new$ arp -an
? (10.0.42.1) at 0:0:24:c8:b2:4c on en1 [ethernet]
? (10.0.42.2) at 0:c0:b7:6c:19:b on en1 [ethernet]
```

```
hlk@bigfoot:basic-ipv6-new$ ndp -an
Neighbor                               Linklayer Address   Netif Expire      St Flgs Prbs
::1                                     (incomplete)        lo0 permanent R
2001:16d8:fffd2:cf0f:21c:b3ff:fec4:e1b6 0:1c:b3:c4:e1:b6 en1 permanent R
fe80::1%lo0                            (incomplete)        lo0 permanent R
fe80::200:24ff:fea8:b24c%en1  0:0:24:c8:b2:4c       en1 8h54m51s S R
fe80::21c:b3ff:fec4:e1b6%en1  0:1c:b3:c4:e1:b6       en1 permanent R
```

```
# Simple stateful network firewall rules for IPv6
# using IPv4 file for input and inspiration from
# http://www.ipv6style.jp/en/building/20040526/2.shtml
# input from
#       $fwcmd6 -f flush
#       $fwcmd6 add allow all from any to any via lo0
# Allow ICMPv6 destination unreachable
#       $fwcmd6 add pass ipv6-icmp from any to any icmptypes 1
# Allow NS/NA/toobig (don't filter it out)
#       $fwcmd6 add pass ipv6-icmp from any to any icmptypes 2
# Allow timex Time exceeded
#       $fwcmd6 add pass ipv6-icmp from any to any icmptypes 3
# Allow parameter problem
#       $fwcmd6 add pass ipv6-icmp from any to any icmptypes 4
# IPv6 ICMP - echo request (128) and echo reply (129)
#       $fwcmd6 add pass ipv6-icmp from any to any icmptypes 128,129
# IPv6 ICMP - router solicitation (133) and router advertisement (134)
#       $fwcmd6 add pass ipv6-icmp from any to any icmptypes 133,134
# IPv6 ICMP - neighbour discovery solicitation (135) and advertisement (136)
#       $fwcmd6 add pass ipv6-icmp from any to any icmptypes 135,136
```

IPv6 firewalls, cont. allowing services

```
# Allow all established connections to persist (setup required
# for new connections).
$fwcmd6 add allow tcp from any to any established
$fwcmd6 add allow tcp from any to any out setup
# allow access to my webserver and ssh
# $fwcmd6 add allow tcp from any to any 80,443 setup
$fwcmd6 add allow tcp from any to any $ssh setup

# allow access to X11 forwarding over ::1
$fwcmd6 add allow tcp from any to ::1 6010 setup

#
# Politely rejects AUTH requests (e.g. email and ftp)
$fwcmd6 add reset tcp from any to any 113

#
# Deny everything else ipv6
$fwcmd6 add 65435 deny log ipv6 from any to any
```

Native IPv6 - available at some hosting providers in DK

Automatic tunnels 6to4, Teredo etc.

- 6to4 benytter IPv4 infrastrukturen
- Teredo sender IPv6 gennem IPv4/UDP pakker

Configured tunnels and tunnelbrokers

- <http://sixxs.net> IPv6 Deployment & Tunnel Broker
- <http://he.net> hurricane electric internet services

Allocating IPv6 addresses

You have plenty!

Providers will typically get /32

Providers will typically give you /48 or /56

Your /48 can be used for:

- 65536 subnets
- Each subnet has 2^{64} addresses

Danish IPv6 Task Force

Danish IPv6 task force - unofficial <http://www.ipv6tf.dk>

IPv6 is here already - use it

<http://www.ipv6actnow.org/>

Welcome to VikingScan – miniscan

http://miniscan6.vikingscan.org/ Google

VikingScan.org - free portscanning

Home Miniscan List

On this page you can configure and start a portscan of your IP-address from this server.
Your IP-address is: 2001:16d8:dd0f:cf0f:223:6cff:fe9a:f52c

Configure and start a scan of the IP-address

Note that this service is currently software in development and you also need to make sure that you are allowed to scan the IP-address specified.

Do you need more? What about a basic webtest for DKK 8.000 ex VAT?

© 2009 VikingScan.org: Free portscanning
<http://www.vikingscan.org>

WEB SCANNING WIRELESS SCANNING
PENETRATION TESTING SECURITY TRAINING
SECURE WEBSERVERS
IMPLEMENTING IPV6
FIREWALLS & VPN

Security is a process, not a tool, not a single portscan

Security .net

VikingScan.org is a service of Security6.net
Security6.net provides this service for the community for free. If you need firewalls, penetration testing, security consulting please visit [Security6.net](http://www.security6.net).
